

# INTRODUCING THE... WILSON DE-BURRING TOOL

Available for Trumpf or turret style machines

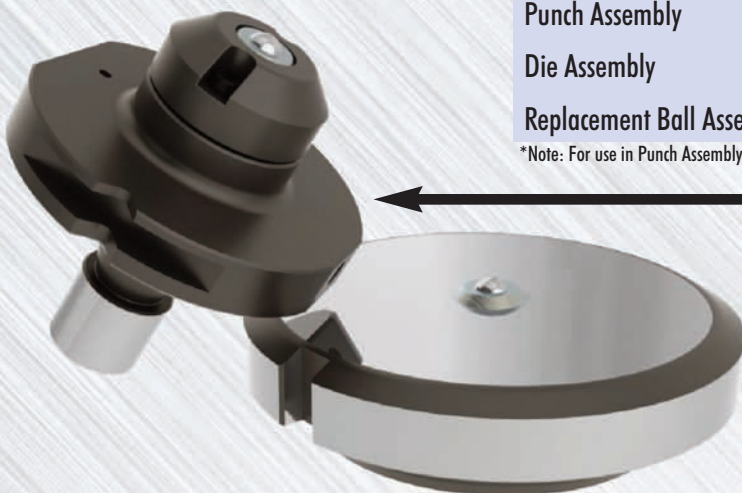

Use the Wilson De-burring Tool to accurately de-burr sharp edges in straight lines or arcs.

## Benefits/Specifications:

- De-burr directly on your punch press to remove expensive secondary de-burring operations.
- A single tool can be used to de-burr in straight lines or arcs, including acute angles and very small radii.
- Can be used at high speed to minimise manufacturing times.
- Can be used with micro-joints to hold components in place for simple programming and handling of parts.
- Punch ball-assembly pressure can be adjusted without disassembly to save time.
- Special ball assemblies are designed for extended tool life on a range of sheet materials.
- Burrs are removed by coining a small chamfer on the cut edge to minimise swarf and offcuts.
- For use in materials from 0.8mm to 6mm thick.

Description	Cat. No. (Trumpf Style)	Price	Cat. No. (Thick Turret)	Price
Complete Tool	26697		13878	
Punch Assembly	26698		13879	
Die Assembly	26699		13880	
Replacement Ball Assembly (1-off)*	26700		26700	

\*Note: For use in Punch Assembly or Die Assembly
